January 12, 2021

Dear Letchworth Families,

To protect the health of our students, staff and community visitors, we gathered water samples from classroom faucets, bubblers, drinking fountains, ice machines and cafeteria food preparation areas. Samples were then submitted to an independent testing service where they were examined against the standard for safe levels of lead in drinking water established by the EPA. This guideline recommends taking “action” to mitigate water containing more than 20 parts per billion of lead due to the potential health risks it can have, especially in pregnant women and children less than 6 years old. This process is mandated to occur every five years.

After the results are returned to the District our maintenance staff remediates any areas of concern.

Our remediation plan includes replacing the bubblers, placing signage in appropriate areas (no drinking), replacing water fixtures (pipes) when necessary and retesting the water. During the time required for the retesting to occur, the water supply to these three areas will be shut off or restricted to non-drinking use of the water source.

When the results of the retesting are received back, they will be communicated to staff and students. If the water lead levels test below the suggested limits, the water supply will be turned back on to these areas.

Please know that we test many areas that are not even required by law. We go “above and beyond” to ensure we have safe water in our District.

If you have any questions you can reach out to the District and speak with our Director of Facilities, Todd Brant, at 585-493-3550.

Respectfully,

Todd Campbell
